

CLAIMS

What is claimed is:

- 1 1. A lid support comprising:
2 a support platform; and
3 a plurality of platform support legs extending downwardly from said
4 support platform, wherein the combined structure of said support platform
5 and said plurality of platform support legs is such that a plurality of the lid
6 supports are able to be intimately stacked for efficient storage.

- 1 2. The lid support of claim 1, wherein said support platform is tapered to
2 provide a narrower portion and wider portion, and a first platform support
3 leg extends downwardly proximate a front edge of said narrower portion, and
4 second and third platform support legs extend downwardly proximate a rear
5 edge of said wider portion.

- 1 3. The lid support of claim 1, wherein said support platform is tapered to
2 provide a narrower portion and wider portion, and said plurality of platform
3 support legs includes a serrated support leg and two opposed support legs,
4 said serrated support leg extending downwardly and outwardly proximate a
5 front edge of said narrower portion, and said two opposed support legs
6 extending downwardly proximate a rear edge of said wider portion.

- 1 4. A lid support comprising:
2 a support platform; and
3 a serrated edge extending downwardly and outwardly from said support
4 platform.

- 1 5. The lid support of claim 4, wherein said support platform includes a grasping
2 member such that the support platform serves as a handle to use said serrated
3 edge as a cutting implement.

- 1 6. The lid support of claim 5, wherein said grasping member is a hole in said
2 support platform.
- 1 7. The lid support of claim 4, wherein said serrated edge is provided on a
2 serrated support leg.
- 1 8. The lid support of claim 7, further comprising:
2 at least two platform support legs extending downwardly from said
3 support platform, such that said serrated support leg and said at least two
4 platform support legs maintain said support platform in a substantially
5 horizontal plane.
- 1 9. The lid support of claim 8, wherein the combined structure of said support
2 platform, said serrated support leg, and said platform support legs is such that
3 a plurality of the lid supports are able to be intimately stacked for efficient
4 storage.
- 1 10. The lid support member of claim 9, wherein said support platform is tapered
2 to provide a narrower portion and wider portion, said serrated support leg
3 extending downwardly and outwardly from a front edge of said narrower
4 portion, and said platform support legs extending downwardly from a rear
5 edge of said wider portion.
